

Junior Data Analyst Project Brief

Agricultural Export Profitability & Operational Performance Analysis

Background

You have recently joined AgroGlobal Export Ltd. as a Junior Data Analyst Intern. The company exports agricultural commodities to international markets. Management has collected operational data covering orders, logistics, customers, costs and profitability. They believe valuable business opportunities and operational problems are hidden in the data but lack evidence-based insights.

Your Role

Use only Microsoft Excel and Power Query to clean, validate, analyse and communicate findings. Think like an analyst: investigate, explain and recommend actions.

Business Problems

1. Revenue is growing but profitability is inconsistent.
2. Shipping costs appear to be increasing.
3. Some export markets may not be profitable.
4. Delivery delays may affect customer satisfaction and profit.
5. Management is unsure which products deserve additional investment.
6. Data quality issues may have affected previous reports.

Analysis Objectives

Answer these questions:

- Which products generate the highest revenue?
- Which generate the highest profit?
- Which high-revenue products have weak profit margins?
- Which countries contribute most revenue and profit?
- Which destinations are expensive to serve?
- Are delivery delays associated with lower profitability?
- Which shipping methods are most efficient?
- Which suppliers and warehouses perform best?
- Which months or quarters perform best?
- What operational inefficiencies exist?
- What recommendations should management implement?

Deliverables

Produce: (1) Data Cleaning Report, (2) KPI Summary, (3) Exploratory Analysis, (4) Charts supporting findings, (5) Executive Summary, (6) Business Recommendations.

Success Criteria

Every conclusion must be supported by evidence from the dataset. Explain the business impact and recommend practical actions.

Portfolio Goal

Your finished project should demonstrate your ability to clean messy data, analyse operational performance, uncover insights and communicate recommendations using only Excel and Power

Query.
